

GENERAL MILLS

February 4, 2015

Dear Valued Customer:

On January 26, 2012, the US Department of Agriculture (USDA) Published "The Nutrition Standards on the National School Lunch and Breakfast Program" in the Federal Register. As part of this rule, the USDA requires that half of all grains served at lunch be whole grain-rich beginning July 1, 2012, followed by breakfast on July 1, 2013. By July 1, 2014, all grains served in all school meals must be whole grain-rich.

A serving of whole grain-rich food must meet portion size requirements for the Grains/Breads component as defined in the Food and Nutrition Service (FNS) guidance AND meet at least one of the following\*:

- (a) the whole-grain content per ounce equivalent grain (oz eq) must be at least 8.0 grams or more for Groups A – G. For Groups H and I, the volumes or weights listed in Exhibit A must be met to credit as one oz eq.
- (b) the product includes the following Food and Drug Administration (FDA)-approved whole grain health claim on its packaging. "Diets rich in whole grain foods and other plant foods and low in total fat, saturated fat, and cholesterol may reduce the risk of heart disease and some cancers."
- (c) the product ingredient declaration lists whole grain first. Whole grain must be the primary ingredient by weight (a whole grain is the first ingredient in the list with an exception for water). A grain-based product is also considered whole grain-rich if water is listed as the first ingredient on the ingredient label and a whole grain is listed as the second ingredient on the ingredient label.

\*Per USDA Memo SP 30-2012 from April 26, 2012 titled *Grain Requirements for the National School Lunch Program and School Breakfast Program* the USDA has changed the terminology, serving sizes, and quantities of grain in school meal programs.

Operators have two methods for crediting oz eq grains:

- In the 16g method, operators calculate the exact grams of creditable grain in a finished product. 16g equals 1 ounce equivalent grain. General Mills uses this crediting method for products in Exhibit A, Groups A–G.
- In the *Exhibit A: School Lunch and Breakfast* method, finished products must meet the equivalent minimum weight within the appropriate Group to meet the ounce equivalent grain criteria. General Mills uses this crediting method for products in Exhibit A, Groups H and I.

As of today's date, the General Mills products listed in the following table provide at least 0.5 oz eq grains and either contain  $\geq$  8 grams of whole grain per serving or list whole grain as the first ingredient (with an exception for water as the first ingredient). We certify that products in Groups A-H contain less than 0.25 oz equivalent (or 3.99 grams for Groups A-G or 6.99 grams for Group H) of non-creditable grains. Product information can change at any time. Always refer to product package for current nutrition and ingredient information.

I certify that the above information is true and correct.
